

John Tristan Dolfo

AI-Native Web Developer · Agentic Engineering

Quezon City, Philippines · tristandolfo@gmail.com · +63 999 882 7004

tristandolfo.netlify.app · github.com/dolfonator

SUMMARY

AI-native web developer who ships production websites by orchestrating Claude Code and Codex as coordinated agent teammates. From first contact with agentic coding in June 2026 to a live portfolio, five shipped projects — three commercial, two personal — and three freelance client deals now closing, in under two months on a single Claude Pro plan. Convinced that agentic engineering is the next frontier of software development, and building the process discipline to help lead it.

SELECTED WORK — FREELANCE WEB DEVELOPER (AI-NATIVE) · JUN 2026 - PRESENT

- **Personal portfolio** · tristandolfo.netlify.app — Astro 7 static build with a design-token CSS architecture, content collections, WCAG AA contrast verified in both themes, *prefers-reduced-motion* honored by every animation, JSON-LD structured data, and a generated OG-image plus sitemap pipeline. Dual-host deploy configs (Netlify and Vercel) kept in sync. Includes an in-house canvas constellation field — no library — that pauses offscreen, caps device pixel ratio, and hard-disables under reduced-motion and Save-Data. Built end-to-end with Claude Code; the site itself is the strongest sample of the work.
- **Cafe Order & CRM Dashboard** — mobile-first full-stack PWA for a Metro Manila matcha cafe: order intake, customer records, data import, and settings behind a PIN-gated boundary. React, TypeScript, Supabase, Netlify.
- **Herminia's Food** · herminias-food.vercel.app — conversion-focused site for a Quezon City event caterer: Filipino-language hero, per-occasion event pages, per-head packages, gallery, reviews, and a direct booking-and-quote route with JSON-LD structured data.
- **Justdiz Preproductions** · justdiz-preproductions.vercel.app — cinematic concept site for a Quezon City photo and video studio: a story-first portfolio that leads, a services grid, an illustrative rates ledger, and a real inquiry surface. Art-directed to look like the business it's for, not a template.
- **The Big Thirty** · bdav-public.netlify.app — privacy-safe full-stack keepsake site: editable story, shared letters, gallery uploads, and interactive reveal controls, backed by an isolated Netlify Blobs store.
- **Bubu Workout** · beautiful-bubu-workout.vercel.app — single-file HTML/CSS/JS editorial training plan with animated character assets and a mobile-first reading experience.
- **Three prospect-client deals in closing** within the first two months of freelancing.

HOW I WORK — AGENTIC WORKFLOW

- Run Claude Code and Codex in parallel, with per-project context systems (CLAUDE.md, PRODUCT.md, DESIGN.md), persistent memory files, and end-of-session context-update protocols that keep multi-week builds consistent across sessions.
- Optimize quality-per-token: pre-task verification prompts, single-source-of-truth master documents, evidence-based debugging, and surgical diffs over rewrites.
- Currently mapping SDLC best practices into agentic workflows — working toward an “Agentic SDLC” framework rigorous enough to convince the skeptics.

SKILLS

Agentic — Claude Code, Codex, MCP, custom skills, memory and context engineering, token-cost optimization

Web — Astro, React, TypeScript, HTML/CSS/JavaScript, Supabase, responsive design, accessibility (WCAG AA), SEO and structured data, Netlify, Vercel, Git

Foundations — programming fundamentals, database design, embedded and IoT (ESP32, LoRaWAN), SCADA

EARLIER TECHNICAL EXPERIENCE

- **IT Intern**, Philippine government agency (2026) — supported internal IT operations; discovered and adopted agentic coding workflows on the job.
- **Point-of-sale system** — co-developed a POS system covering sales, inventory, and database design for a local electronics retailer.
- **Engineering capstone** — LoRaWAN fire-alarm network linking alarm control panels across multiple buildings to a central fire station in real time, with a web-based admin panel for station personnel.

EDUCATION

BS Electronics Engineering — Ateneo de Davao University, 2021–2026

Undergraduate; 155 units completed. Capstone: LoRaWAN fire-alarm network.

BS Life Sciences (prior coursework) — Ateneo de Manila University, 2017–2020

Secondary education — Ateneo de Manila High School, 2014–2017 · *graduated with honors*

LEADERSHIP & VOLUNTARY WORK

Head of Sponsorships and Partnerships — Society of Electronics Engineering Students (SELECOMES), Ateneo de Davao University · Apr 2023 – Mar 2024

Org Promotions Representative — SELECOMES, Ateneo de Davao University · Mar 2024 – Apr 2025

Project Head — Project Liwanag · Aug 2016 – Apr 2017

TRAINING & DEVELOPMENT

All technical workshops conducted by the Society of Electronics Engineering Students (SELECOMES), Ateneo de Davao University · 3 hours each.

Introduction to ESP32 Workshop · March 2026

Introduction to 3D Printing: From Pixels to Plastic · February 2026

Supervisory Control and Data Acquisition (SCADA) Workshop · September 2025

Basic Electronics Repair and Micro-Soldering · April 2025

WHY BRIDGEMIND

Longtime follower of Matt's streams and the "Vibe Coding an App Until I Make \$1,000,000" series. I want to help build the platform where agentic engineering becomes the obvious META for shipping software — and prove it by helping BridgeMind define the Agentic SDLC.
